

Water System Updates

Notice Regarding Municipal Policy - Water Meters & Double Check Valves

On April 5/18, The Resort Village of Thode adopted the following policy effective immediately:

That all municipal owned water meters and the double check valves must be installed properly. The Municipality of the Resort Village of Thode will not be responsible for damage caused to water lines while accessing these components. If the location of the water meter or double check valve is deemed to be unsafe for access by our staff, the home owner must make arrangements and contract with a properly certified plumber to change out the unit.

This policy is necessary to address the water meters that are installed in locations of the home where Occupational Health and Safety will not allow our employees to enter. If a seasonal meter is to be removed and reinstalled, it needs to be attached by appropriate union connections that provide for easy removal/installation on secured lines that will support the meter assembly.

Meters & double Check Valves

Please remember to inspect your meter and double check valve and report any leaks on these components to the Operations Manager @ 306 492 7922. It is the property owner's responsibility to ensure that these components are not leaking. If there is evidence of a leak, the municipality will replace the part. If the leak is a result of damage due to freezing or neglect, the home owner will be invoiced for the required component(s).
